

Please follow the following steps to run this app properly.

Steps:-

- 1.) Open the folder named boilerplate on any IDE.
- 2.) Open terminal with current location as /boilerplate.
- 3.) On the terminal type "npm run start" and this will make the app run on localhost:3000.
- 4.) As app opens, fill the details asked and if you miss any field then during submission the app will give you a prompt and will ask you to fill that.
- 5.) Once all fields are filled then click on button "Let me know you!!".
- 6.) As you will click that, a message will pop up, which will be a message from the app and this is only the required output for this app.
- 7.) Further click on "Hide Please" button to add any new input to it.

Thanks and hope that you had a good experience with my small app.
